

UI DESIGN – EXERCISE

This assignment is intended to see how skilled you are in the fields of UI design and site-building. There are tasks for each.

1. UI Design:

Please create a finalized UI design based on the prototype attached. You can use any program that you like (PS, AI, Figma, Sketch, XD). You can freely choose any color theme. Pay attention to colors, shadows, fonts selection, and the overall look-and-feel of the page. The topic and content of the page can be whatever you like. You can use lorem ipsum for the text, or dummy icons (FontAwesome), and you can create your own logo design or recreate this one.

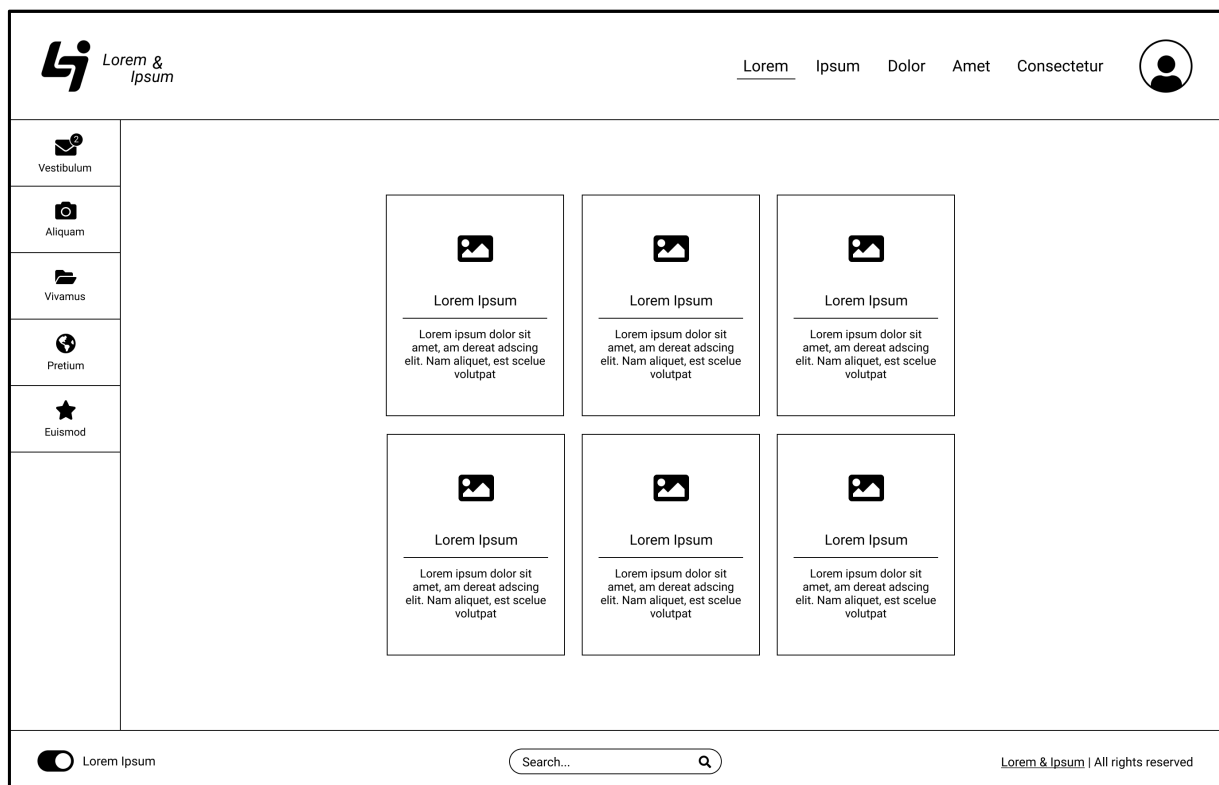

2. Site-Build:

After you are done with the UI design, start building the site based on your design. The page you are building should be a simple static site, but make it responsive (it should work on desktop, mobile, and pretty much any screen resolutions).

The elements should be created manually, so please don't use any framework (like Bootstrap) but you can use a CSS preprocessor (e.g. SASS, LESS).

Optional: the toggle in the bottom-left corner should have a function: when turned on, it should change something on the page (open a popup, change color theme, switch high contrast mode or dark mode, etc.)

Please send us both the UI mockup (PNG, PSD, or a link in case of Figma or XD), and the site you have built (ZIP).
